

Introducing the first fully integrated, connected Indoor Air Quality System - **Overture™**

Fresh, clean air is essential to life. In fact, we take around 25,000 breaths each day. We believe every one of those breaths should be a healthy one, so we've created the first, fully integrated and cloud-connected whole home monitoring and ventilation system called Overture™.

Overture™ uses sophisticated sensor technology to monitor your home's indoor air quality. When it detects a rise in indoor air pollution caused by increased humidity, Volatile Organic Compounds (VOCs), carbon dioxide (CO₂) and small particles (sometimes referred to as PM2.5), the system will automatically turn on the nearest ventilation fan to eliminate the pollutant while simultaneously bringing in fresh, clean air from outside.

The Overture™ App

While Overture™ can work quietly in the background, we've created a phone app that allows you to fully customize your system to meet your needs and comfort level. The app provides an overview of your entire home's air quality as well as a detailed view of each room in which a sensor has been placed. An Indoor Air Quality indicator provides live data for each room and the whole home, giving you a snapshot of your current IAQ levels.

Installing Overture™ is a breeze.

Overture™ Smart Air Quality Monitor Room Sensor

BIAQRS100

provides indoor air quality monitoring for rooms that do not have a ventilation fan. These sensors can be plugged into any 120V household electrical outlet.

Overture™ Smart Plug

BIAQSP100P

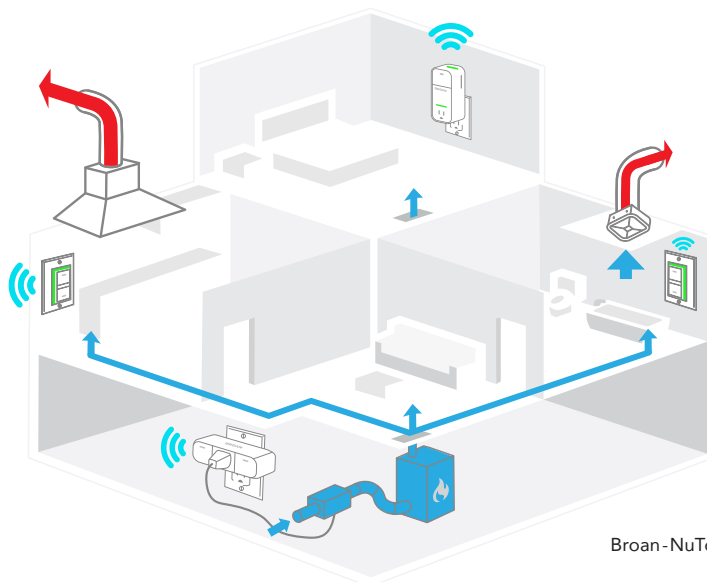

activates your home's Fresh Air System when a room sensor anywhere in the home senses a rise in indoor air pollution and is installed where the home's Fresh Air System is plugged in.

Overture™ Smart Wall Control

BIAQWC100P

with built in sensors connects to ventilation fans in rooms such as the kitchen, bathroom, and laundry room in the same way you'd connect a standard wall switch.

How Overture™ works in your home:

Overture's cloud-based system combines sensors, switches and connected plugs with your home's Broan-NuTone ventilation fans, range hood, and fresh air system to automatically monitor for and eliminate polluted air and introduce fresh, filtered air.
